

Integrating the Publishing Environment (IPE)

The only realistic approach towards digitalization. Decentralized, collaborative and participative.

IPE presents a radically different digitalization strategy for the publishing industry. Focusing on standardized IT interfaces, it allows cross-company interoperability and business processes.

This community driven approach disrupts the classical vendor lock-in, liberating companies from the mercy of a single software manufacturer. It thus creates a decentralized, participative and collaborative economic space. Most importantly, IPE ends the current centralized platform economy.

Lastly, IPE is feasible. It (i) mimics a successful blueprint from health-care IT, can (ii) start with a tiny community, and can (iii) grow organically. Indeed, IPE poses the only viable approach for digitalizing the publishing environment.

IPE is in its founding stage.
